Vsebina:	Content (Syllabus outline):
Statika	Statics
Sila v kartezijevem koordinatnem sistemu, zunanje in notranje sile, ravnotežje sil, moment, Varignonov teorem, moment dvojice sil, koncentrirane sile ali točkovne obremenitve, kontinuirane obremenitve, trenje na ravni podlagi in na kolutih.	Force in the cartesian coordinate system, internal and external forces, the balance of forces, moment, Varignon's theorem, moment of a force couple, concentrated force or point loads, continuous loads, friction at the surface and discs.
Trdnost	Strength
Napetostni vektor na ploskvi, zveza med napetostmi in deformacijami, normalne in tangencialne specifične deformacije, Hookov zakon, modul elastičnosti, strižni modul, osnovne obremenitve, nateg, tlak, ploščinski tlak, upogib, vztrajnostni moment prereza, strig, vzvoj, stabilnostni problemi (uklon, izbočenje).	Tension vector on the surface, the relationship between stresses and deformations, normal and shear specific deformations, Hooke's law, Young's modulus, shear modulus, base load, tension, pressure, surface pressure, bending, moment of inertia, shear, torsion, stability problems (buckling).
Kinematika in kinetika	Kinematics and kinetics
Pot, hitrost, pospešek, enakomerno gibanje, enakomerno pospešeno gibanje, kroženje, kotni pospešek, gibalna količina, delo, moč, energija, trk, gibanje teles spremenljive mase.	Displacement, velocity, acceleration, uniform motion, uniformly accelerated motion, circular motion, angular acceleration, angular momentum, work, power, energy, collision, motion of bodies with variable mass.
Mehanika vožnje	Mechanics of driving
Mehanski model vozila, sile in odpori pri gibanju vozila, zavore, vozilo na konveksni in na konkavni podlagi, varovanje tovora proti zdrsu in prevračanju.	Mechanical model of the vehicle, forces and resistances in the movement of the vehicle, brakes, vehicle on the convex and concave surface, protecting cargo against slipping and tipping.
Hidromehanika	

Kompresijski modul, viskoznost tekočin, masne in volumske sile, Reynoldsovo število, meritve pri pretakanju, Bernoullijeva enačba, sile pri pretakanju.	Hydromechanics
Elektrostatika	Electrostatic
Elektrostatično polje, električni potencial in električna napetost, kapacitivnost in kondenzator, energija električnega polja.	Electrostatic field, electric potential and electric tension, capacitance and capacitor, energy of the electric field.
Enosmerni električni tok	Direct electric current
Ohmov zakon, Kirchoffova zakona, električna moč in delo, Joulov zakon.	Ohm's law, Kirchoff's law, electric power and work Joule's law.
Magnetno polje	Magnetic field
Izvori magnetnega polja, sila na tokovodnik v magnetnem polju, Amperov zakon, magnetilna krivulja in histerezna zanka, induktivnost tuljave, Faradayev zakon elektromagnetne indukcije.	Origins of the magnetic field, force on a conductor in a magnetic field, Ampere's law, magnetic curve and hysteresis loop, inductance of the coil, Faraday's law of electromagnetic induction.
Izmenični električni tok	Alternating electric current
Sinusna izmenična napetost, izmenični tokokrogi, enofazni in večfazni sistemi.	Sinusoidal alternating voltage, alternating current circuits, single-phase and multi-phase systems.
Električni motorji	Electric motors
Motorji na enosmerni in na izmenični tok, sinhronski motorji, asinhronski motorji, servomotorji.	Motors on direct and alternating current, synchronous motors, induction motors, servomotors.
Elektronika	Electronics
Elektronska vezja, mikroprocesorji, senzorji, črtna koda, RFID.	Electronic circuits, microprocessors, sensors, bar code, RFID.

Cilji in kompetence:

Cilj predmeta je seznaniti študente s temeljnimi znanji s področja statike, trdnosti, kinematike, dinamike, mehanike vožnje in hidromehanike in osnov elektrotehnike ter elektronike. Prav tako je predmet namenjen pridobitvi praktičnih izkušenj na področju mehanike, merilne tehnike in delovanja električnih naprav ter elektronskih vezij.

Objectives and competences:

The goal of this course is to acquire basic knowledge from the field of statics, strength, kinematics, dynamics, mechanics of driving, hydromechanics and basis of electrical engineering with electronic. Another goal is to acquire practical experience in the field of mechanics, measuring techniques and functioning of electrical devices and electronic circuits.

Predvideni študijski rezultati:

Po opravljenem izpitu iz tega predmeta bo študent sposoben pridobljeno znanje uporabiti pri reševanju industrijskih mehanskih in elektrotehniških problemov v logistiki.

Intended learning outcomes:

Upon passing the exam, students will be able to use the acquired knowledge for solving industrial mechanical and electrical engineering professional problems in logistics.

Metode poučevanja in učenja:

Predavanja: pri predavanjih študent spozna teoretične vsebine predmeta. Del predavanj se izvaja na klasični način v predavalnici, del pa v obliki e-predavanj (e-predavanja se lahko izvajajo na videokonferenčni način

Learning and teaching methods:

Lectures: students understand the theoretical frameworks of the course. Part of the lecture course is in a classroom while the rest is in the form of e-learning (e-lectures may be given via video-conferencing or with the

<p>ali s pomočjo posebej v ta namen didaktično pripravljenih e-gradiv v virtualnem elektronskem učnem okolju).</p> <p>Vaje: pri vajah študent utrdi teoretično znanje in spozna aplikativne možnosti. Del vaj se izvaja na klasični način v predavalnici, del pa v obliki e-vaj (e-vaje se lahko izvajajo na videokonferenčni način ali s pomočjo posebej v ta namen didaktično pripravljenih e-gradiv v virtualnem elektronskem učnem okolju).</p>	<p>help of specially designed e-material in a virtual electronic learning environment).</p> <p>Tutorials: Students enhance their theoretical knowledge and are able to apply it. Part of the seminar is in a classroom while the rest is in the form of e-learning (e-tutorials may be given via video-conferencing or with the help of specially designed e-material in a virtual electronic learning environment).</p>
