Cilji in kompetence:

- Študenti spoznajo in osvojijo pojme linearne algebre ter matematične analize, se naučijo natančnosti izražanja, pisanja in razmišljanja in se usposobijo uporabljati teoretično znanje v konkretnih primerih.

Objectives and competences:

- Students are familiarised with and grasp the basic concepts of algebra and mathematical analysis. They learn to write, think and express themselves accurately and they gain the ability to apply their theoretical knowledge in practice.

Predvideni študijski rezultati:

- Sposobnost obvladanja standardnih metod in postopkov matematične analize
- Sposobnost uporabe pridobljenega teoretičnega znanja v praksi
- Avtonomnost v svojem strokovnem delu

Intended learning outcomes:

- Ability to master standard methods and procedures of mathematical analysis
- Ability to use the acquired knowledge in practice
- Independence in professional work

Metode poučevanja in učenja:

Predavanja:

pri predavanjih študent spozna teoretične vsebine predmeta. Del predavanj se izvaja na klasični način v predavalnici, del pa v obliki e-predavanj (e-predavanja se lahko izvajajo na videokonferenčni način ali s pomočjo posebej v ta namen didaktično pripravljenih e-gradiv v virtualnem elektronskem učnem okolju).

Vaje:

Število študentov pri vajah mora biti prilagojeno modernim učnim in izobraževalnim metodam.

Learning and teaching methods:

Lectures: Students understand the theoretical frameworks of the course. Part of the lecture course is in a classroom while the rest is in the form of e-learning (e-lectures may be given via video-conferencing or with the help of specially designed e-material in a virtual electronic learning environment).

Seminars: The number of students attending seminars must be adjusted according to the modern teaching and learning methods. Part of the seminar is in a classroom
