UČNI NAČRT PREDMETA/COURSE SYLLABUS	
Predmet:	PRINCIPI SKLADIŠČENJA IN EMBALIRANJA
Course title:	PRINCIPLES OF WAREHOUSING AND PACKAGING

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
LOGISTIKA SISTEMOV 2.stopnja		2.	3.
SYSTEM LOGISTICS 2nd degree		2.	3.

Vrsta predmeta / Course type	IZBIRNI

Univerzitetna koda predmeta / University course code:
klinične vaje

Nosilec predmeta / Lecturer:	TONE LERHER

Jeziki / Languages:	Predavanja / Lectures:	SLOVENSKI / SLOVENE
	Vaje / Tutorial:	SLOVENSKI / SLOVENE

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisits:
Ni pogojev.	None.

Vsebina:	Content (Syllabus outline):
Predavanja:	Lectures:
1. Uvodno poglavje – razvoj in pomen skladiščnih sistemov v transportno-skladiščni logistični funkciji.	1. Introduction – importance of warehouse systems in the transport-warehouse logistics function.
2. Materialni tok – skladišče kot sistem čakalne vrste ("tekočinski model").	2. Material flow – warehouse as a queuing system ("fluid flow model").
3. Operacije skladiščenja – sprejem, naročila, komisioniranje, kontrola, pakiranje, odprema.	3. Warehouse operations – receiving, process customer orders, order-picking, checking, packing, put away.
4. Upravljanje skladiščnih sistemov – sprejem in odprema, zaloge, lastnosti, oskrba trga.	4. Warehouse management systems – receiving and shipping, stock locator system, features, market supply.
5. Skladiščna in manipulativna oprema – oprema za uskladiščenje, transporterji, sortirna oprema.	5. Storage and handling equipment – storage equipment, transporters, sorting equipment etc.
6. Vrste viličarjev – glede na principe delovanja, pogone, zmogljivosti, nosilnosti.	6. Types of forklifts – due to their working principles, drive motors, carrying capacity, bearing strength.
7. Transportni vozički – klasični, avtonomni, montažni – namenski vozički, induktivno vodeni itd.	7. Transportation handcarts – classical, autonomous, assembling – special handcarts, inductive guided etc.
8. Transportno skladiščne enote – palete, zaboji.	8. Transport storage unit – pallets, boxes etc.
9. Oblikovanje in načrtovanje embalaže.	9. Designing and planning of packing.
10. Tehnološki postopki pakiranja: vakumsko pakiranje, sterilno pakiranje, pakiranje v modificirani atmosferi, aktivno pakiranje.	10. Technological procedures of packing: vacuum packing, sterile packing, packing in a modified atmosphere, active packing.
11. Varovanje tovora in varno manipuliranje – pri notranjem transportu, pri transport na daljše razdalje, varno upravljanje s transportnimi sredstvi.	11. Protection of goods and safety manipulating – at interior transport, at transport on long distance, safety managing with transport devices.
12. Skladiščne strategije.	12. Storage strategies.
13. Komisioniranje – načini, sredstva, cone.	

14. Oblikovanje skladiščnih sistemov – regalni skladiščni sistemi, konstrukcija skladišč, optimiranje oblike. Seminar: Seminar aplikativno dopolnjujejo vsebino predavanj s praktičnim reševanjem problemov skladiščnih sistemov.	13. Order picking – types, equipment, zones. 14. Design of warehouse systems – storage rack systems, construction of the warehouse, shape optimisation. Seminar: Seminar (project) work supplement lectures with practical solutions of engineering problems concerning warehouse operations.

- Lerher, T. & Šraml, M. (2012) Designing unit load automated storage and retrieval systems. V: MANZINI, Riccardo (editor). Warehousing in the global supply chain : advanced models, tools and applications for storage systems. London [etc.]: Springer. 2012, pp. 211-231.

Cilji in kompetence:	Objectives and competences:
- podati poglobljeno znanje s področja teorije, uporabe in pomena transportnih sistemov v kompleksnem logističnem procesu, - prikazati praktično uporabo predhodno pridobljenih osnovnih znanj iz matematike, diskretnih metod, mehanike in transportne tehnike, - razviti sposobnosti študentov za samostojno in kreativno reševanje problemov izbire in uporabe transportnih naprav v logističnem sistemu.	- to provide detailed knowledge of basic theory, functional use and importance of transport systems in the complex logistics process, - to demonstrate practical use of previously accumulated skills of mathematics, mechanics and transport technique, - to further develop student's capabilities of independent and creative solutions for transportation devices at logistics system.

Predvideni študijski rezultati: | Intended learning outcomes:

Znanje in razumevanje:	Knowledge and understanding:
- poznavanje pojma tehniške logistike s poudarkom na skladiščenju in embaliranju, - poznavanje osnovnih konceptov logistične verige, principov delovanja sistemov transporta, projektnih zahtev in sledenje tovora v logističnem sistemu, - povezovanje različnih znanj in postopkov ter pomena uporabe strokovne literature in računalniških sistemov za reševanje logističnih problemov.	- knowledge of technical logistics conception with an emphasis on storage and packaging, - knowledge of fundamental principles of logistics – supply chain, operation principles of transport systems, projects demands and tracking the freight in the logistics system, - connection of different knowledge and procedures and importance of professional literature and computer systems for efficient solutions of logistics problems.
Prenesljive/ključne spretnosti in drugi atributi:	Transferable/Key skills and other attributes:
- povezovati uporabo različnih znanj za reševanje problemov logistike pri transportnih sistemih, - osnove izbire in projektiranja transportnih naprav v logističnem sistemu.	- combined use of different fundamental skills for solution of internal transport logistics problems, - fundamentals of selection and projecting of transport devices at logistics system.

Metode poučevanja in učenja:	Learning and teaching methods:
Predavanja: pri predavanjih študent spozna teoretične vsebine predmeta. Del predavanj se izvaja na klasični način v predavalnici, del pa v obliki e-predavanj (e-predavanja se lahko izvajajo na videokonferenčni način ali s pomočjo posebej v ta namen didaktično pripravljenih e-gradiv v virtualnem elektronskem učnem okolju).	Lectures: Students understand the theoretical frameworks of the course. Part of the lecture course is in a classroom while the rest is in the form of e-learning (e-lectures may be given via video-conferencing or with the help of specially designed e-material in a virtual electronic learning environment).
Vaje: pri vajah študent utrdi teoretično znanje in spozna aplikativne možnosti. Del vaj se izvaja na klasični način v predavalnici, del pa v obliki e-vaj (e-vaje se lahko izvajajo na videokonferenčni način ali s pomočjo posebej v ta namen didaktično pripravljenih e-gradiv v virtualnem elektronskem učnem okolju).	Tutorials: Students enhance their theoretical knowledge and are able to apply it. Part of the seminar is in a classroom while the rest is in the form of e-learning (e-tutorials may be given via video-conferencing or with the help of specially designed e-material in a virtual electronic learning environment).

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
• Opravljene domače in projektna naloga,	50%	• Completed home-works and seminar (project) work,
• ustni izpit (teoretično in praktično znanje).	50%	• oral examination (theoretical and practical knowledge).
Opravljene obveznosti e-predavanj in e-vaj so pogoj za pristop k izpitu.		Successful completion of e-lectures and e-tutorials is a prerequisite for entering the exam.
