Vsebina:	Content (Syllabus outline):
<p>Statika Sila v kartezijskem koordinatnem sistemu, zunanje in notranje sile, ravnotežje sil, moment, Varignonov teorem, moment dvojice sil, koncentrirane sile ali točkovne obremenitve, kontinuirane obremenitve, trenje na ravni podlagi in na kolutih.</p> <p>Kinematika in kinetika Pot, hitrost, pospešek, enakomerno gibanje, enakomerno pospešeno gibanje, kroženje, kotni pospešek, gibalna količina, delo, moč, energija, trk, gibanje teles spremenljive mase.</p> <p>Elektrostatika Elektrostatično polje, električni potencial in električna napetost, kapacitivnost in kondenzator, energija električnega polja. Enosmerni električni tok Ohmov zakon, Kirchoffova zakona, električna moč in delo, Joulov zakon.</p> <p>Magnetno polje Izvori magnetnega polja, sila na tokovodnik v magnetnem polju, Amperov zakon, magnetilna krivulja in histerezna zanka, induktivnost tuljave, Faradayev zakon elektromagnetne indukcije.</p>	<p>Statics Force in the cartesian coordinate system, internal and external forces, the balance of forces, moment, Varignon's theorem, moment of a force couple, concentrated force or point loads, continuous loads, friction at the surface and discs.</p> <p>Kinematics and kinetics Displacement, velocity, acceleration, uniform motion, uniformly accelerated motion, circular motion, angular acceleration, momentum, work, power, energy, collision, motion of bodies with variable mass.</p> <p>Electrostatic Electrostatic field, electric potential and voltage, capacitance and capacitor, energy of the electric field. Direct electric current Ohm's law, Kirchoff's law, electric power and work Joule's law.</p> <p>Magnetic field Origins of the magnetic field, force on a conductor in a magnetic field, Ampere's law, magnetic curve and hysteresis loop, inductance of the coil, Faraday's law of electromagnetic induction. Alternating electric current</p>

Izmenični električni tok
Sinusna izmenična napetost, efektivna vrednost, izmenični tokokrogi, električna moč, enofazni in večfazni sistemi.
Električni motorji
Motorji na enosmerni in na izmenični tok, sinhronski motorji, asinhronski motorji, servomotorji.
Elektronika
Elektronski elementi in vezja, senzorji, črna koda, RFID.

Sinusoidal alternating voltage, effective (RMS) value, alternating current circuits, electric power, single-phase and multi-phase systems.
Electric motors
Motors on direct and alternating current, synchronous motors, induction motors, servomotors.
Electronics
Electronic elements and circuits, sensors, bar code, RFID.

Cilji in kompetence:

Cilj predmeta je seznaniti študente z osnovnimi teoretičnimi in praktičnimi znanji s področja mehatronike. Študenti pridobijo znanja in veščine, ki jim omogočajo samostojno reševanje osnovnih mehatronskih problemov v praksi.

Objectives and competences:

The objective of this course is to acquaint students with basic theoretical and practical knowledge in the field of mechatronics. Students acquire knowledge and skills that enable them to solve basic mechatronic problems in practice.

Predvideni študijski rezultati:

Po opravljenem izpitu bo študent sposoben:

- razumeti osnovne fizikalne zakone statike, dinamike, kinematike in elektrotehnike,
- razumeti osnovno delovanje električnih in mehanskih komponent mehatronskih naprav,
- pridobljeno znanje uporabiti pri reševanju praktičnih mehatronskih problemov v logistiki.

Intended learning outcomes:

Upon passing the exam, students will be able to:

- understand the basic physical laws of statics, dynamics, kinematics and electrical engineering,
- understand the basic operation of electrical and mechanical components of mechatronic devices,
- use the acquired knowledge for solving professional mechatronic problems in logistics.

Metode poučevanja in učenja:

Predavanja: pri predavanjih študent spozna teoretične vsebine predmeta. Del predavanj se izvaja na klasični način v predavalnici, del pa v obliki e-predavanj (e-predavanja se lahko izvajajo na videokonferenčni način ali s pomočjo posebej v ta namen didaktično pripravljenih e-gradiv v virtualnem elektronskem učnem okolju).

Vaje: pri vajah študent utrdi teoretično znanje in spozna aplikativne možnosti. Del vaj se izvaja na klasični način v predavalnici, del pa v obliki e-vaj (e-vaje se lahko izvajajo na videokonferenčni način ali s pomočjo posebej v ta namen didaktično pripravljenih e-gradiv v virtualnem elektronskem učnem okolju).

Learning and teaching methods:

Lectures: students understand the theoretical frameworks of the course. Part of the lecture course is in a classroom while the rest is in the form of e-learning (e-lectures may be given via video-conferencing or with the help of specially designed e-material in a virtual electronic learning environment).

Tutorials: Students enhance their theoretical knowledge and are able to apply it. Part of the seminar is in a classroom while the rest is in the form of e-learning (e-tutorials may be given via video-conferencing or with the help of specially designed e-material in a virtual electronic learning environment).

Načini ocenjevanja:	Weight (in %)	Assessment:
<ul style="list-style-type: none"> • Opravljene obveznosti e-predavanj in e-vaj so pogoj za pristop k izpitu. • Pisni izpit, • ustni izpit, • laboratorijske vaje (za uspešno opravljen predmet je potrebno, da so vsi trije deli izpita ocenjeni več kot 50 %). 	<p>30 %</p> <p>50 %</p> <p>20 %</p>	<ul style="list-style-type: none"> • Successful completion of e-lectures and e-tutorials is a prerequisite for entering the exam. • Written exam, • oral exam, • laboratory work (to successfully pass the exam, all three parts of the exam needs to be evaluated above 50 %).
