Zelena Slovenija: Priročnik Razvoj embalaže v krožnem gospodarstvu, 2019, ISBN 978-961-6282-59-5, COBISS.SI-ID 301422592.

Cilji in kompetence:

Cilji predmeta so:

- opredeliti naloge in osnovne značilnosti embalaže in pakiranja, predstaviti vlogo embalaže v logistiki,
- predstaviti različne vrste embalaže, in opredelitev kako pakirne enote sestaviti v transportne enote,
- predstaviti označevanje embalaže in GS1 standarde,
- teoretično opredeliti tehnike in tehnologije embaliranja,
- predstaviti tehnološke procese embaliranja,
- predstaviti ravnanje z odpadki in razbremenilno logistiko.

Kompetence, ki jih študentje osvojijo:

- so sposobni izbrati primerno embalažo glede na njen namen uporabe in področje logistike,
- poznajo različne vrste embalaže in znajo manjše enote embalaže primerno sestaviti v večje enote,
- poznajo različne tehnike in tehnologije embaliranja in so sposobni izbrati primerno tehniko in tehnologijo za namen uporabe,
- poznajo standarde na področju označevanja embalaže,
- poznajo tehnološke procese embaliranja,
- se zavedajo pomena pravilnega ravnanja z odpadki in razbremenilne logistike,
- teoretično predstaviti uporabo 3D tiskanje na primeru embalaže.

Objectives and competences:

The objectives of the course are:

- define the tasks and basic characteristics of packaging and wrapping, present the role of packaging in logistics,
- present different types of packaging, and define how to assemble packaging units into transport units,
- present packaging labelling and GS1 standards,
- theoretically define packaging techniques and technologies,
- present technological processes of packaging,
- present waste management and reverse logistics.

Competences that students acquire:

- are able to choose the appropriate packaging according to its purpose and area of logistics,
- know different types of packaging and know how to properly assemble them into larger units,
- know different packaging techniques and technologies and are able to choose the appropriate technique and technology for the purpose of use,
- know the standards in the field of packaging labelling,
- know the technological processes of packaging,
- are aware of the importance of proper waste management and reverse logistics,
- theoretically present the use of 3D printing on the example of packaging.

Predvideni študijski rezultati:

Študent je ob zaključku predmeta zmožen:

Intended learning outcomes:

Upon completion of the course, the student is able to:

- | | |
|--|---|
| <ul style="list-style-type: none"> • izbrati primerno embalažo glede na namen njene uporabe, • uporabiti različne vrste embalaže glede na namen njene uporabe, • izbrati primerne tehnike in tehnologije embaliranja, • pravilno označiti embalažo na različnih nivojih, • analizirati tehnološke procese embaliranja, • pravilno pristopiti k ravnanju z odpadki in načrtovanju razbremenilne logistike, • uporabiti 3D tiskalnik za namen ustvarjanja embalaže. | <ul style="list-style-type: none"> • select appropriate packaging according to the purpose of its use, • use different types of packaging depending on the purpose of its use, • select appropriate packaging techniques and technologies, • correctly mark the packaging at different levels, • analyze technological processes of packaging, • take the right approach to waste management and material return planning, • use a 3D printer for the purpose of creating packaging. |
|--|---|

Metode poučevanja in učenja:

Predavanja: pri predavanjih študent spozna teoretične vsebine predmeta. Del predavanj se izvaja na klasični način v predavalnici, del pa v obliki e-predavanj (e-predavanja se lahko izvajajo na videokonferenčni način ali s pomočjo posebej v ta namen didaktično pripravljenih e-gradiv v virtualnem elektronskem učnem okolju).

Vaje: pri vajah študent utrdi teoretično znanje in spozna aplikativne možnosti. Del vaj se izvaja na klasični način v predavalnici, del pa v obliki e-vaj (e-vaje se lahko izvajajo na videokonferenčni način ali s pomočjo posebej v ta namen didaktično pripravljenih e-gradiv v virtualnem elektronskem učnem okolju), študentje se udeležijo ekskurzije in izvedejo laboratorijske vaje na področju 3D tiskanja.

Learning and teaching methods:

Lectures: students understand the theoretical frameworks of the course. Part of the lecture course is in a classroom while the rest is in the form of e-learning (e-lectures may be given via video-conferencing or with the help of specially designed e-material in a virtual electronic learning environment).

Tutorials: Students enhance their theoretical knowledge and are able to apply it. Part of the seminar is in a classroom while the rest is in the form of e-learning (e-tutorials may be given via video-conferencing or with the help of specially designed e-material in a virtual electronic learning environment), students take part in excursions and perform laboratory exercises in the field of 3D printing.

Načini ocenjevanja:	Delež (v %) / Share (in %)	Assessment methods:
<ul style="list-style-type: none"> ▪ Opravljene obveznosti e-predavanj in e-vaj so pogoj za pristop k izpitu. <p>Predavanja:</p> <ul style="list-style-type: none"> ▪ Pisni izpit. <p>Vaje:</p> <ul style="list-style-type: none"> ▪ Seminarska naloga z zagovorom pri vajah. ▪ Ocena e-vaj. 	70 %	<ul style="list-style-type: none"> ▪ Successful completion of e-lectures and e-tutorials is a prerequisite for entering the exam. <p>Lectures:</p> <ul style="list-style-type: none"> ▪ Written examination. <p>Tutorial:</p> <ul style="list-style-type: none"> ▪ Seminar paper with presentation on the tutorials. ▪ Grade from e-tutorials.
